

NEXLIGHT BUSINESS SOLUTIONS

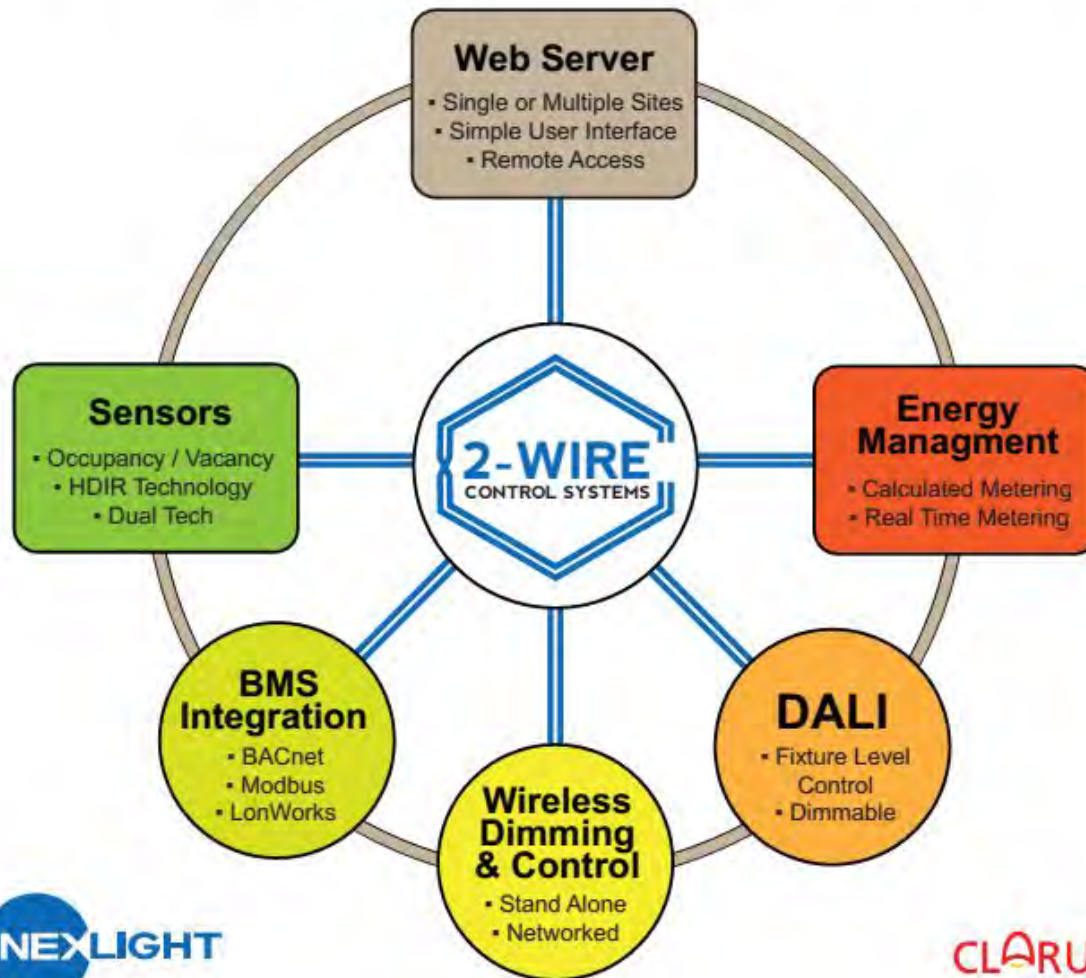

**Nexlight Delivers
Complete Solutions**

The NexLight Solution

Whether it's custom residential lighting or scalable office solutions, NexLight provides low-voltage lighting systems for every need. Offices, schools, industrial facilities, sports arenas. You name it, we light it with maximum ease, flexibility, and cost-effectiveness.

NEXLIGHT BUSINESS SOLUTIONS

NexLight Business Solutions

COMPANY MISSION

NexLight is Simple. Reliable. Flexible.

NexLight is Value.

NexLight is Designed to Fit Your Building.

NEXLIGHT IS SIMPLE. RELIABLE. FLEXIBLE.

NexLight has been implementing design built lighting control systems tailored to meet specific needs of large and complex commercial and industrial facilities for more than 25 years.

Our **worldwide reputation for 100% reliability** controlling high inrush loads in critical environments is one that no other controls manufacturer can match. Years after initial installation, when new technologies are available, modifying and upgrading the system is simple and fast and all with the lowest installed cost.

NEXLIGHT IS VALUE.

A leader in energy reduction, NexLight Control systems save an average of 30-60% in building electrical energy costs. Used frequently in LEED building projects, energy savings begin the day of system activation and continue for the life of the building.

Schools, university campuses, hospitals, federal buildings, airports, warehouses, office parks, correctional & manufacturing facilities are all ideal applications for our system, improving living and working environments for building occupants.

NEXLIGHT IS DESIGNED TO FIT YOUR BUILDING.

Unlike other lighting control manufacturers, NexLight control systems are designed to fit the specific requirements of each building project. Our difference is delivering reliable systems that meet today's higher energy standards while providing the flexibility to grow with future facility needs.

With thousands of installations around the U.S.A. and abroad, NexLight continues to lead in design built solutions for buildings requiring the highest level of reliability, even in the harshest conditions.

THE NEXLIGHT DIFFERENCE

Design built solutions

- Distributed system design has become easier with the development of more devices that operate off the 2-Wire communications bus without the need of additional power sources.
- Nexlight's occupancy sensor easily integrates with a building lighting control system.
- The NexLight 2-Wire system is simple to design, flexible to install and reliable to outlast all other lighting control manufacturers.

No one makes it easier.
"Just Send Us the Plans"

THE NEXLIGHT DIFFERENCE

Simple

Connect Unlimited Switches with 2-Wires

- No pulling additional wire
- No thick conduit
- Add or remove switches in seconds
- Eliminates traditional wiring problems

Each System Control Unit With 2-Wires

- 256 Individual Addresses
- 127 fully customizable groups
- 72 fully customizable patterns (scenes)
- Expand systems using multiple SCU's

With NexLight there is no need to modify wiring to make changes in switch control. The wireless programming unit (WTR9600) works like a TV remote; Add or modify switch functions in seconds.

Flexible

All system-wiring connections are two signal wires. The wires are non-polarized, free topology minimizing the chance of installation errors.

Reliable

Extremely reliable components

Customer Support &
Onsite Service

THE NEXLIGHT DIFFERENCE

Worlds Best "Total System Solution" NexLight Delivers the Complete Package

System components connect
on the 2-Wire Bus*

Line Voltage
Run From
Breaker Panel
to Relays

Master Relay Panel

Switches
(Wall, Master, Card, Tamper
Resistant, HD, LCD Touch, Wireless)

Sensors
(Occupancy, Daylight)

Additional Panels
(Auxiliary, Dimming, Mini, Network, Wall Saver)

*2-Wire Bus: 16 gauge unshielded, untwisted pair (Belden 6200UE) or equal with no additional connectors- Link unlimited number of relay panels, low voltage switches, sensors and other accessories in any order, any distance. Free topology and non-polarized system architecture makes wiring easy and greatly reduces cost.

THE NEXLIGHT DIFFERENCE

TOTAL CONTROL WITH THE PUSH OF A BUTTON

Always Flexible

Any switch may be configured for Individual, Group or Pattern control. LEDs at all switches show true status of the load. Additionally, switch programming can be easily adjusted in seconds without removal from its mounting location. See programming guide for more details.

Group

Pattern

360° Support: Every NexLight system includes the lifetime 360° support program, ensuring a fully operational control system for the life of the building. The quality of NexLight commercial and industrial systems are unmatched in the industry, it provides us the confidence to back all our systems with lifetime service and support. Its no wonder why NexLight is number one for customer service.

360° Customer Support Program

PRE-BUILD:

- Design Build Quotes
- Custom Panel Assembly
- On site in as little as 3 weeks

INSTALLATION:

- Free Phone Support
- "Direct-dial" speak with a NexLight system expert immediately
- 5-year Product Guarantee

FOLLOW-UP SUPPORT:

- On-site commissioning
- On-site system training
- Phone support with NL expert available for system support and troubleshooting

WIRELESS DIMMING & CONTROL

Wireless Control Is Here

How it works:

Each light fixture or zone is outfitted with a ZigBee Dimming Transceiver which provides 0-10V dimming and ON/OFF control to the fixture or zone. The device sends and receives communication to the LCD touch Switch and/or ZigBee Gateway Units allowing for control of ZigBee devices in either a stand-alone or 2-Wire system architecture.
